THE GOAL
To gain knowledge about the complex, sometimes controversial, relationship between science and religion in contemporary society.

SOME OF THE QUESTIONS BEING EXPLORED
- How are scientific advances influencing religious beliefs and practices?
- How do scientists and religious leaders interact and communicate in society?
- How do scientific findings challenge or support religious narratives?
- What are the implications of scientific and religious perspectives on social issues such as ethics, morality, and justice?
- How do differences in scientific and religious worldviews affect interfaith dialogue and understanding?

One of my greatest hopes is that we will discover pure knowledge we don’t currently have, and that we may bring help to some of the most pressing social problems facing our modern world. Common ground has never been more needed.

GROUP MEMBERSHIP
Group members possess comprehensive knowledge and abilities. Through group interaction, challenges and ideas are identified, discussed, and communicated to the public.

WHAT IS SOCIOLOGY?
Sociology is the scientific study of human behavior in groups and societies. It uses various research methods to analyze social structures, processes, and dynamics. Sociology examines how social systems, institutions, and behaviors are shaped by individual actions, cultural norms, and societal influences.

- Surveys
- Interviews
- Experiments
- Observation
- Statistical modeling

Group identifies needs and issues in society and develops strategies for addressing them.
